

Wood & Pellet Stove Safety

As the temperature drops outside, wood and pellet stoves may be fired up inside the home. What you may not realize is that heating equipment is one of the leading causes of home fires during the winter months.

- » Have a **QUALIFIED** professional install stoves, chimney connectors, and chimneys.
- » Stoves should be listed by a qualified testing laboratory.
- » In wood stoves, burn only **DRY**, seasoned wood. In pellet stoves, burn only dry, seasoned wood pellets.
- » Have your chimney and stove **INSPECTED** and cleaned by a certified chimney sweep every fall just before heating season.
- » **CLEAN** the inside of your stove periodically using a wire brush.
- » Allow ashes to **COOL** before disposing of them. Place ashes in a covered metal container. Keep the container at least 10 feet away from the home and other buildings.
- » Keep a **CLOSE EYE** on children whenever a wood or pellet stove is being used. Remind them to stay at least 3 feet away from the stove.
- » Stoves need **SPACE**. Keep anything that can burn at least 3 feet away from the stove.
- » **INSTALL** and maintain **carbon monoxide alarms** (CO) outside each sleeping area and on every level of the home. For the best protection, interconnect the CO alarms. When one sounds, they all sound.

SMOKE ALARM SENSE

Install and maintain smoke alarms on **EVERY** level of your home, outside each separate sleeping area and inside each bedroom. For the best protection, interconnect the alarms.

When one sounds, they all sound. **TEST** all smoke alarms at least monthly.
